

High temperature fabric plus the mirror like molten aluminum coating ricochets the heat away and delivers superior performance. More durable reflective heat-shield vs. films and foil, Ricochet bends and contours without creasing like foils, and withstands higher temperatures than reflective films.

Also available untreated or with a moisture barrier, or laminated to insulation blanket.

Base Material:	Fiberglass
Thickness:	0.014"
Weight:	12 oz/yd ²
Treatment:	Melt Bonded Molten Aluminum
Finish:	Chemical Resistant*
Weave:	Twill
Width:	58"
Roll Length:	50 yards
Service Temperature:	1100°F
